

Project Examination Commission 2022

Report from on the audited project proposals 2022

a) General

Important factors in the examination of the submitted project applications were the compatibility with permaculture criteria, the feasibility and the available financial resources.

In 2022, the support association concentrated on the women's project. This was directly supervised by the president and the board. Therefore, the project examination commission did not have to deal with it.

b) Projects financed

In 2022, we only received two requests for financial support outside the women's project. These were the purchase of bicycles and a new solar-powered pump for the borehole, which was no longer functional after more than six years. Both requests were approved.
